U.S. Patent and Trademark Office PTOL-303 (Rev. 7-05)

Continuation of 11. does NOT place the application in condition for allowance because: the specification states that a laminated board can be formed by pressing a base layer of a cellulose material, at least one intermediate layer consisting of a very thin sheet of natural wood and at least one outer covering layer formed from an appropriate material under specific pressure and temperature conditions, the said materials being impregnated by synthetic resins which help to create a very compact and strong board through the application of pressure and heat. Therefore, although applicant argues that the discussion of the prior art teaches incorporating the wood layer to improve the aesthetic value of the laminate, the portion cited in the office action and set forth above, page 1, lines 15-24, teaches forming a strong board by putting the wood layer inside the laminate with the outer cellulosic layers and resin impregnation as taught by Valerius and JP '508.
